

Derivations are also observed in national stage application.

The ratio R is calculated based on:

$R(EP,JP,CN) = \text{number of OA containing unity rejection} / \text{total number of OA (EESR in EP)}$

$R(US) = (\text{number of Restriction Requirement} / (\text{number of first OA} + \text{number of RR}))$

*Trying to collect the cases which received OA around October 1 to December 31, 2013
(conditions are different from one country to another)

*In EP cases, EESR including rule 43(2) objection are NOT counted.

*In US cases, Election of Species are also counted.
